

The next generation of blasting...

Weighing less than the closest competitor, the GenVX® offers the most cooling options, plus removable, adjustable cheek pads for added comfort. GenVX is the lightest, coolest, most comfortable, and most dependable helmet on the market.

Lightest

- · Lighter than the competition
- Plenum-less plenum or inner shell (integrated, molded-in airflow tunnel)
- High-Density Polyethylene construction offers superior strength-to-weight ratio

Coolest

- The helmet is designed to pass air directly over the head and surround the face
- · Provides the most cooling options

Comfortable

- · Six-point suspension with wide 1" straps
- · Center breathing tube connection
- · Removable, adjustable cheek pads for increased stability

Dependable

- 1000 APF independent third-party documentation
- ANSI/ISEA Z89 Head Protection and High-Impact Z87 + Face Protection
- "Grit Guard" visor and injection-molded door provides tight seal

Bullard Air Cooling Systems

Bullard offers six belt-mounted climate control devices for use with Bullard airline respirators. Each system enables a worker to adjust and control the temperature of the air delivered to the respirator.

Cool Tube Assemblies

Bullard Cool Tubes cool incoming air from breathing air sources by as much as 20-30° F (11-17° C). These cool tubes feature adjustable airflow control valves that allow the user to adjust the incoming air temperature to a level best suited to individual comfort. Bullard Cool Tubes include Models AC1000 (for use with compressed air), Frigitron2000 (for use with Bullard ADP20 and EDP30 Free-Air® Pumps) and ACL99 (for use with Lancer Series respirators). Accessories include leather heat shield and assorted belts.

CT Cool Tube

The latest innovation in climate control... the CT Cool Tube helps maintain worker comfort and maximize productivity when working in extremely hot and humid environments. Lightweight and comfortable, weighing 3.8 ounces, the CT cools incoming air by as much as 32°F while directing hot air away from the body. Equipped with an exhaust filter that protects against paint overspray and extends the product life. The CT Cool Tube is available with the DynaSwivel fitting for greater mobility.

Hot/Cold Tube Assemblies

Bullard Hot/Cold Tubes cool or warm incoming air from compressed breathing sources. When used in cool mode, the Hot/Cold Tube decreases the incoming air temperature by as much as 30° F (17° C). When warming incoming air, with a Bullard Hot/Cold Tube, the air temperature can be increased by up to 30° F (17° C). The Bullard Hot/Cold Tube is Model HC2400. Accessories include leather heat shield and assorted belts.

Dual-Cool Tube

Cool your air temperature and your body temperature with one device. The Bullard Dual-Cool Series cools the incoming air temperature and directs cool air to a vest for upper torso cooling, as well. The Dual-Cool will cool incoming air from compressed breathing sources by as much as 30° F (17° C). Separate control knobs allow the worker to adjust the temperature of air to each zone. Dual-Cool Series systems include DC Series cooling vests and assemblies. Accessories include leather heat shield and assorted belts.
