WATERJET AND BLASTING GARNET

GMA GARNET

GMA Garnet is a uniquely strong natural mineral that effortlessly outperforms other abrasives when used in conjunction with the recommended equipment and air pressure.

1. HARDNESS

A higher relative resistance to abrade a surface compared to other abrasives.

2. TOUGHNESS

To remove surface coatings effectively, an abrasive must be tough enough to resist fracturing on impact.

3. DENSITY

A heavier, denser abrasive grain outperforms a less dense abrasive.

Waterjet Classic Cut 80

The most popular waterjet cutting abrasive grade used worldwide that delivers the optimum balance of cutting speed and precision edge for a wide variety of applications.

300 - 150 micron

Garnet Advantages

- Supports peak performance
- Offers high production rates and superior edge quality
- Tightly graded to minimize downtime and maximize production
- World's most popular waterjet abrasives.
